# Custom Entry Point

Step 1: Go to Custom >> Extension >> application >> Ext >> EntryPointRegistry (if doesn't exist, then create a folder) >> create showContacts.php file and write code in this file, with file path and auth

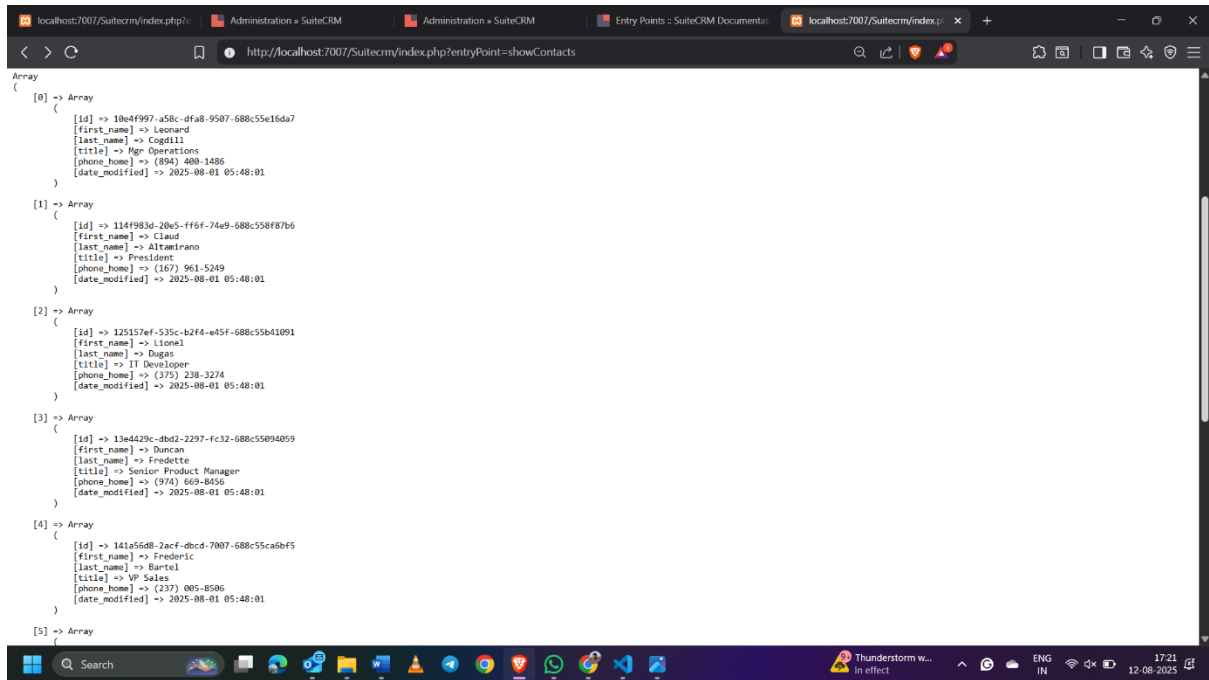

Step 2: Create the showContacts.php file in custom >> Unify >> applications >> EntryPoints. And write code in it.

Step 3: After the code is done, go to the admin panel >> repair >> Quick Repair and Rebuild.

Step 4 : After creating both files in the following path, open the browser and run this " http://localhost:7007/Suitecrm/index.php?entryPoint=showContacts ". You will get output like this, here we used print_r() to display data.

To display the data in table format, instead of using "print_r()", use echo and html table tag

Last 10 Contacts
